

One Connect

SAP & Confluent Cloud Integration Within Minutes

Streamline your data integration process between SAP and Confluent Cloud effortlessly with Onibex One Connect.

The **ONLY** connector between **SAP** and **Confluent Cloud** capable of creating **Schema Registries** and **Topics On the Fly**, with support for Schema Evolution.

One Connect + Confluent Cloud = Fast Innovation

Onibex One Connect is an advanced solution that offers a range of qualities and advantages **optimizing the data flow from SAP to Confluent Cloud** within minutes, facilitating integration with over **+200 Confluent connectors**.

High Performance in Parallel Writes

One Connect has the ability to support parallel writes on a large scale, reaching magnitudes of hundreds of thousands of messages per minute.

Reliable Delivery Guarantee

The use of Dead Letter and error flow patterns ensures that messages sent from SAP reliably reach their destination, preventing losses or interruptions in the transfer process.

Customizable Alert System

One Connect offers an alert system that can be customized according to customer preferences, allowing them to stay informed about any critical situations as they arise.

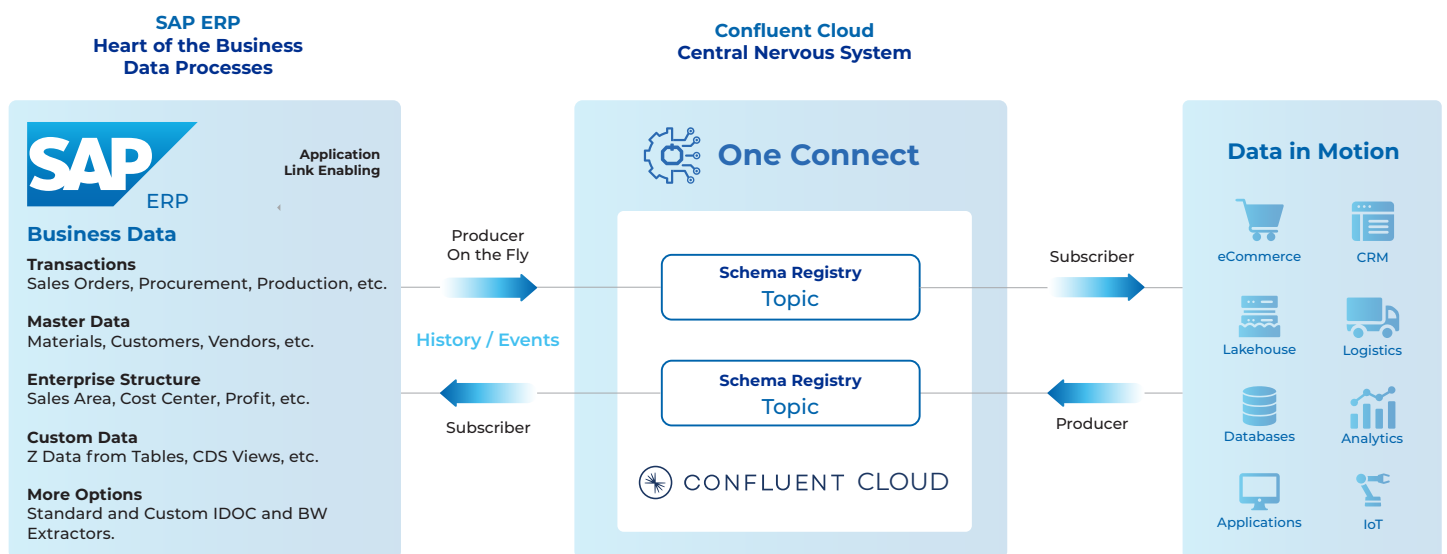

Cloud Agnostic

Thanks to its container-based implementation, One Connect is platform-independent and can run on any operating system and cloud.

Historical Data & Real-Time Event-Based Integration

How it works

Onibex One Connect enables the transfer of data from **SAP ECC or S/4Hana to Confluent Cloud**. This empowers the ingestion of both **historical and real-time data**, which can then be processed using any of the available Confluent sink connectors. By establishing this connection, businesses can efficiently transfer data to other applications, databases, and analytics platforms, ensuring that the information is always up-to-date and available for **real-time endless use cases**.
